recent advances in science and technology have made modern computing and engineering systems more powerful and sophisticated

than ever the increasing complexity and scale imply that system reliability problems not only continue to be a challenge but also require more efficient models and solutions this is the first book systematically covering the state of the art binary decision diagrams and their extended models which can provide efficient and exact solutions to reliability analysis of large and complex systems the book provides both basic concepts and detailed algorithms for modelling and evaluating reliability of a wide range of complex systems such as multi state systems phased mission systems fault tolerant systems with imperfect fault coverage systems with common cause failures systems with disjoint failures and systems with functional dependent failures these types of systems abound in safety critical or mission critical applications such as aerospace circuits power systems medical systems telecommunication systems transmission systems traffic light systems data storage systems and etc the book provides both small scale illustrative examples and large scale benchmark examples to demonstrate broad applications and advantages of different decision diagrams based methods for complex system reliability analysis other measures including component importance and failure frequency are also covered a rich set of references is cited in the book providing helpful resources for readers to pursue further research and study of the topics the target audience of the book is reliability and safety engineers or researchers the book can serve as a textbook on system reliability analysis it can also serve as a tutorial and reference book on decision diagrams multi state systems phased mission systems and imperfect fault coverage models

the bachelier society for mathematical finance held its first world congress in paris last year and coincided with the centenary of louis bacheliers thesis defence in his thesis bachelier introduces brownian motion as a tool for the analysis of financial markets as well as the exact definition of options the thesis is viewed by many the key event that marked the emergence of mathematical finance as a scientific discipline the prestigious list of plenary speakers in paris included two nobel laureates paul samuelson and robert merton and the mathematicians henry mckean and s r s varadhan over 130 further selected talks were given in three parallel sessions
